Issued Monthly

May 25, 2023

HONEY MARKET FOR THE MONTH OF APRIL 2023 IN VOLUMES OF 10,000 POUNDS OR GREATER UNLESS OTHERWISE STATED

Prices paid to beekeepers for extracted, unprocessed honey in major producing states by packers, handlers & other large users, cents.
per pound, f.o.b. or delivered nearby, containers exchanged or returned, prompt delivery & payment unless otherwise stated.

- REPORT INCLUDES BOTH NEW AND OLD CROP HONEY - (# Some in Small Lot --- +Some delayed payments or previous commitment)

CALIFORNIA

Buckwheat	Light Amber	\$2.80

COLONY, HONEY PLANT AND MARKET CONDITIONS DURING APRIL 2023

APPALACHIAN DISTRICT (MD, PA, VA, WV): April was a very busy month for beekeepers with up and down temperature changes throughout the month depending on the day and above average swarming activity. Colonies were bringing in pollen district wide as the bloom for most plants continued to run earlier than normal. Brood rearing was very active and colony numbers quickly increased keeping beekeepers busy making splits or chasing down swarms. Precipitation was around normal for the month but did not hinder pollen and nectar levels. Bees were very active foraging on spring ephemerals and maples at the start of the month followed by a prolific bloom of orchards (apricot, cherry, peach, nectarine and apples), redbud, willow, tulip poplar, blueberries, strawberries, dandelion, yellow rocket, and mustard. There were a couple of reports of damage to colonies by bears.

ALABAMA: In Alabama, April began warmer than usual, with abnormally dry conditions reported through the state. As the month progressed, drought-like conditions mostly dissipated; cooler than usual temperatures occurred by the end of the month, especially in northern counties. Beekeepers in southern regions reported fewer swarming events than usual, possibly because late winter freezes reduced nectar production. Plants like native plums, cherries, persimmons, clovers, and berries flowered. In more northern areas, abundant swarming occurred; some cases of European foulbrood were reported. Plants such as privet, clovers, berries and brambles, and holly bloomed. Bee clubs throughout the state organized in person monthly meetings to provide fellowship and support new beekeepers.

ARIZONA: No report issued

ARKANSAS: During the month of April temperatures were well above normal across most of the state. Precipitation was well above normal across most of the same area. According to the U.S. Drought Monitor website, Arkansas had normal soil moisture conditions for most of the state.

Too few prices exist to establish a current market price for wholesale white honey.

CALIFORNIA: Heavy rains this winter and spring led to bountiful blooms for California bees to forage this April. But continued cool weather resulted in limited flight time and heavy losses among colonies, especially early in the month. "April was a disaster for the California queen and package producers, due to the weather," a beekeeper said. "April was a busy month for beekeepers in California as winter dead out colonies were restocked when queens became available," another said. "Northern California bee breeders have been two to three weeks behind schedule due to the inclement weather which hampered queen mating and production of mature drones. Bees were able to forage when the weather was warm enough, but there were several spells of colder than normal weather that reduced bee flight and foraging opportunities."

The cool weather caused bees to stay confined in hives early in the month, which eventually led to swarming. "We are trying to make splits but are having trouble finding enough brood and bees in the hives to fill all the deadouts," a beekeeper said. "We have had to resort to buying packages to fill dead-outs. Also, the delay in being able to get queens the first week of April contributed to the swarming problem. We have a lot of virgin queens in our colonies and are unable to tell if they are viable yet."

Some beekeepers noted that unlike Southern California – which benefited from wildflower and sage blooms early in the month – flowers were slow to appear farther north, where "colony buildup has severely lagged, due to poor foraging weather, and delayed blooms. "Many of us are running a month behind 'normal,'" a beekeeper noted.

"There was some citrus and sage nectar collected late in the month in spite of cooler weather," another said. "The plethora of ground flowers provided an abundant supply of pollen in most areas throughout the month." Going forward, beekeepers plan to place hives among vegetable seed crops, vegetables and melons.

FLORIDA: Weather played a big role in honey production in April with basically three different weather scenarios at work. North Florida and the Panhandle were generally cold and dry. A freeze around the middle of the month essentially wiped out the tupelo honey crop and other sources of food for the bees leading to starving conditions for many hives. Supplemental feeding was necessary for most bees. April usually sees a lot of hive splitting in the Panhandle, but conditions were not good for splitting this season. By late in the month palmetto, Gallberry, clover and wildflowers were beginning to bloom in the Panhandle. Central Florida had about normal temperatures and precipitation for the month. By the middle of the month Gallberry and palmetto were blooming. Central Florida beekeepers had good yields from both during the rest of the month. Weather also was favorable for splitting hives during the month. South Florida had too much rain at times during April and it literally washed away much of the pollen from palmetto and Gallberry. This resulted in a lower than expected yield of Gallberry honey in particular and less palmetto honey also. Bee health was considered to be good in Central Florida, less than average in North Florida and about average in South Florida. Demand was good for stored honey at the end of the month which was primarily Gallberry produced in Central Florida.

GEORGIA: Beekeepers are finally able to see what damage the early freezes in February and March with the excessive winds that brought the temperatures down caused. Hopefully the Sourwood crop will be okay. Tupelo appears to be in good shape and the bees were able to get out and make some good honey this year. They are just waiting for the May pull to replenish supplies. Prices are steady. Tupelo \$6.00 lb

IDAHO, COLORADO, UTAH: During the month of April temperatures were normal in Idaho. Western Idaho had precipitation a little above normal and Eastern Idaho had precipitation above normal. Utah had temperatures that were normal and precipitation that was far higher than normal. Colorado had normal temperatures across the whole state, Precipitation for Colorado was a little above normal.

According to the U.S. Drought Monitor website, in April Idaho had no drought to an area of moderate drought, with most of the state under abnormally dry. Utah is currently under no drought to moderate drought conditions. Western Colorado is normal soil moisture with areas of moderate to severe drought in the eastern portions of the state.

Most producers are getting ready to bring their hives home from California and Texas. They are worried about the late spring we are having and if there will be any plants bloomed when the hives come home. It was a very wet spring in California, but this last month hasn't been as wet as it was earlier in the year. Some producers are worried about hive health from being such a wet spring.

Prices for the month of April were between \$2.80 and \$3.20 per pound with a mostly price of \$2.85-\$3.00 for Idaho, Colorado prices are too few producers reporting to determine a market. Prices for locally sourced honey in Utah are \$2.80-\$3.15 per pound with mostly \$3.00.

ILLINOIS: Temperatures for the month of April were warmer than average with less than average rainfall. Beekeepers report that their bees are in good condition. Beekeepers report that the following foliage is in bloom: Pussy willow, soft maple as sources of pollen; maples, and a little dandelion for nectar. Demand for honey is very good at the retail level and good at wholesale level. Prices are generally unchanged.

INDIANA: Temperatures for the month of April were slightly warmer than average. Rainfall in most parts of the state was lower than average for this time of the year. Beekeepers report that maple and willow are in bloom. Most beekeepers report their bees are in good condition, while some are rebuilding. Demand for honey is good at the retail level and fairly good at the wholesale level. Prices are generally unchanged.

IOWA, KANSAS, MISSOURI, NEBRASKA: No report issued.

KENTUCKY: The spring season has been a steady rotation of inspections (commercial, diagnostic, and USDA Honey Bee Health Survey). Whereas March was stormy and windy (blowing over many beehives), April brought milder and dryer conditions. In fact, Easter Sunday unleashed a prolific swarm season. Beekeeping events throughout the state have also picked up steam. The Kentucky State Beekeepers Association, has been planning for the KY State Fair, and due to the increase in prices for bottles, labels, and other supplies for honey producers, this year's producers will see an increase in prices for their products.

LOUISIANA: During the month of April temperatures were below normal across most of the state. Precipitation was about normal across the state. According to the U.S. Drought Monitor website, Louisiana had normal soil moisture conditions across most of the state, with a band of moderate drought conditions along the coast in the southeast corner.

Too few prices exist to establish a current market price for wholesale white honey.

MICHIGAN: No report issued.

MINNESOTA: During the month of April temperatures were normal across the entire state. Precipitation for April was a little above normal for the whole state.

According to the U.S. Drought Monitor website, in April the whole state had normal to abnormally dry soil moisture.

Most producers are getting ready to bring their hives home from California and Texas. They are worried about the late spring and if there will be any plants bloomed when the hives come home.

Prices per pound in Minnesota were \$2.80-\$3.75 with mostly price of \$2.80-\$3.00 for locally sourced honey for the month of April.

MISSISSIPPI: Rain remains a problem for the beekeepers to get an established feeding for bees to make honey. The rain keeps washing the pollen away and they have to start over again. Supplemental feeding helps in some areas that are hit the hardest. There will be a late honey flow as the watermelon fields are about two weeks behind while the blueberries had a fair season. Beekeepers are waiting for the Popcorn to become available with Goldenrod coming in later.

MONTANA: No report issued.

NEW ENGLAND: No report issued.

NEW YORK: Cooler, wet weather in April had only a few occasional hot, dry days, but overall brooding up by the bees is on a normal course. Drones are being reared by the bees. Dandelions are in full bloom with plentiful amounts of pollen being gathered by the bees. Dryer conditions were found in Long Island and the lower Hudson Valley. Migratory hives are situated in fruit orchards, but blooms may be delayed by cooler conditions in some areas. A big month for installation of new nucleus hives, bee packages, and splitting hives for increase in colony numbers. Honey prices and demand remain strong.

NORTH CAROLINA: No report issued.

NORTH & SOUTH DAKOTA: Cold and precipitation limited field work most of this month, but boosted water availability to adequate in nearly all areas. By the end of the month planting was beginning but most commodities were well behind normal progress. Many bees were still working various crops in other parts of the country such as fruit in the Pacific Northwest.

OHIO: Northwest Ohio: April weather started with close to normal temperatures and below normal moisture. The middle of the month turned extremely warm for a week. The last two weeks of the month turned much below normal temperatures. Colonies went into overdrive the week it was warm, but since the extended cool down, most hives have pulled back. There have been very few swarms so far and very poor mating weather for virgin queens. This year had initial warm temperatures quickly replaced by rain, freezing temperatures then more rain, then warming slightly as a finale. The Cleveland area reached 62 degrees F on March 1, then slowly dropped to a low of 18 degrees March 15. Over an inch of rain flooded streets and waterways March 3, which saturated the soils then froze mid-March when 2" of snow fell. Although snow is seldom welcome in March, the total snowfall was still 8" below the average recorded snowfall. The last few days of the month received temperatures in the high to mid-50 degrees. Honey prices have remained stable at \$5.50-\$6.00 per pound wholesale and \$9.00-\$11.00 retail.

West/Southwest Central Ohio Including Wright-Patterson Air Force Base: Extended warm weather for most of April produced major pollen and nectar flows in this area. Both pollen and nectar producing trees bloomed for over two weeks, the spring flower including weeds also produced major pollen and nectar flows. As a result, honeybee colonies (both managed and feral) were swarming or will, this next 20 days. Drones are being produced now but the timing between virgin swarm queens and mature drones may not be in sync.

This general area received adequate rain fall in April. The Greater Cincinnati area also began with a warm 78 degrees which plummeted to 41 degrees that night and continued to drop with 2" of rain March 3, an inch of snow on the 12th, then a low of 17 degrees on March 19. Cincinnati's average temperature ended warmer with the daytime temperatures of 65, dropping to 46 degrees at night.

OKLAHOMA: During the month of April temperatures were about normal across most of the state. Precipitation was about normal across the state. According to the U.S. Drought Monitor website, Eastern Oklahoma had normal soil moisture to moderate drought conditions. Central Oklahoma had moderate to extreme drought conditions. Western Oklahoma had mostly extreme drought conditions.

Too few prices exist to establish a current market price for wholesale white honey.

OREGON: No report issued.

SOUTH CAROLINA: No report issued.

TENNESSEE: Tennessee bees are building up rapidly with the heavy nectar and pollen flows across the state. Major nectar and pollen sources in Tennessee for April were Black Locust, Tulip Poplar, Blackberry, Crimson Clover, Dutch Clover, wild Mustard and wildflowers.

TEXAS: During the month of April temperatures were well below normal across the state. Precipitation during April was above normal for most of the state. According to the U.S. Drought Monitor website, soil moisture conditions for April did change much from last month. East Texas had mostly normal soil moisture conditions. The rest of the state had areas of abnormally dry to severe drought with an area of extreme drought to exceptional drought continuing around the San Antonio area.

Too few prices exist to establish a current market price for wholesale white honey.

WASHINGTON: April started with cold weather delaying most bloom and development on most crops. In Central Washington some bees were put out for the apricots. Cherries were beginning to come on slowly. Early in the month apples and pears were still in tight clusters. Through mid-April the rain and some snow continued. Snow mold was causing damage to turf grass farms due to cold, wet conditions and late snow cover. After mid-April apricots were about done and cherries, peaches, and nectarines were in various stages of development. Apples and pears coming on slowly and asparagus was beginning to emerge. At the end of the month, things began to warm up and dry up. With warmer weather, no precipitation, and night time temperatures above freezing apples and pears were in full bloom, and asparagus harvest began. The best weather yet for field work.

WISCONSIN: Temperatures for the month of April were warmer with a few days of with very little rain. Most Beekeepers are starting over with new packages. Beekeepers report wild foliage for their bees includes maples, Redbuds, apples, dandelions, Forsythia and lots of ephemerals: bloodroot, crocus, fritillaria, winter aconite, hellebore, vinca, scilla, daffodils, tulips and willows. Demand for honey is good at the retail level and fairly good at the wholesale level. Prices are generally unchanged.
